AI Ethics & Responsible Usage Declaration

CSC601 — Data Analytics and Visualisation | Rizvi College of Engineering

---

I hereby declare that:

- The dataset used in this assignment is properly cited and ethically sourced.
- I have analyzed potential biases present in the dataset and model.
- I have considered privacy implications related to the data used.
- I understand the responsible and ethical usage of the developed system/model.
- This work adheres to institutional guidelines on ethical AI practices.

Dataset Details:

Source:

Simulated tweets based on real public discourse on Twitter/X about ChatGPT (manually curated — tweets_dataset.csv)

Type of Data:

Text data — 100 manually tagged tweets in CSV format

Contains Personal/Sensitive Data? (Yes/No):

No

If Yes, describe anonymization steps:

N/A — No personal/sensitive data is present in the dataset

Identified Bias (if any):

The dataset contains a slight class imbalance (Positive: 35, Neutral: 35, Negative: 30). Additionally, since tweets were manually curated and simulated, subjective tagging bias may exist. Negative tweets involving sarcasm or indirect criticism were harder to classify accurately, reflected in lower precision (0.50) and recall (0.33) for the Negative class across all three models.

Responsible Usage Statement:

This sentiment analysis system is developed solely for academic and educational purposes as part of the CSC601 course. The model is trained on a small simulated dataset and should not be used for real-world decision-making without further validation. The system must not be used to profile individuals, spread misinformation, or for any commercially exploitative purpose. Results should be interpreted with awareness of the model's limitations, including small dataset size and potential tagging bias.

Student Details:

Student Name:	**Zaid Musa Seliya**
UIN:	**231A050**
Course:	**AI & DS**
Date:	**3 April 2026**
Signature:
